Subject: IPP Over-Fire Air

Milka,

The attached word file is a description of the proposed over-fire air system covering design and general operating parameters. I appreciate the time you spent discussing this on Thursday. As I pointed out then, we believe that you should be able to make a determination with the information you now have, with the agreement that we will test CO before and after. And we also believe that once a determination is made and testing proves out OFA operation, no further new permitting requirements are necessary.

Since it is coming up on 120 days since this NOI was filed with DAQ, we ask that you give this your highest priority in reviewing our request. At best, we expect that DAQ could publish an intent to approve, and with a 30 day notice, issue an AO before the end of February. If you believe that after your review this is not possible, please get with me immediately. I will phone you Tuesday afternoon for your thoughts.

Thanks
